OUR PRODUCTS

Alfalfa or Lucerne Hay (*Medicago sativa*) — renewed for its nutritional value ruminant's fodder. It is high in proteins and rich in essential amino acids, minerals, including vitamins A and K, making it an excellent source of balanced nutrition for livestock. High digestibility and palatability.

Common Vetch (*Vicia sativa*) — rich in protein and highly digestible, making it a valuable component of livestock diet. It contains essential amino acids, such as lysine, which are vital for animal growth and health. Can be used alone or mixed with other fodders.

Oats Hay (*Avena sativa*) — relatively high in fiber and moderate in protein content, providing essential nutrients for livestock, especially when supplemented with other feeds. Palatable and has good digestibility. Its fibrous content maintains rumen motility and preventing digestive disorders such as acidosis.

Cereal Straw — included in the diet of ruminants as a supplement to other sources of protein and energy. Provides fiber, promotes digestion and the rumination process. It is also ideal as bedding for livestock due to its high absorbency and thermal insulation, offering a clean and comfortable environment for the animals.
